Human drug metabolising enzyme (DME-2) cDNA.

Human; drug metabolising enzyme;
cytostatic; autoimmune disorder;

```
The present sequence is human drug metabolising enzyme (DME-2) cDNA.

Human DME and its nucleic acid molecule are useful for the diagnosis,
treatment and prevention of disorders associated with increased or
decreased expression of DME. Examples of such disorders include,
autoimmune/inflammatory disorder such as acquired immune deficiency
syndrome (AIDS), rheumatoid archritis, osteoporosis; cell proliferative
disorder such as actinic keratosis, atherosclerosis; developmental
disorder such as epilepsy, anaemia; endocrine disorder such as
acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as
acromegaly cretinism, thyrotoxicosis; pancreatic disorder such as
acromegaly disorder such as Addison's disease, obesity; qastrointestinal
disorder such as anorexia, dysphagia and hepatic tumours including
nodular hyperplasia, adenomas and carcinomas. DME DNA is useful for
creating 'knockin' humanisca animals (pigs) or transgenic animals (mice
or rats) to model human disease. DME DNA is also in useful is gene
therapy. DME and its immunogenic fragments are useful for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

```
The nucleotide sequence of the CDNA coding region for the human auxillary cytochrome P450 species 2c6. The gene encodes a protein of 497 amino acids. The CDNA was amplified by PCR using the primers AAQ87763-6. The product was cloned into the yeast expression vectors paAH5N or pAHRR to produce the vectors p2D6 for the expression of the cytochrome P450 compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with recombinantly produced compound by reacting the chemical compound with resoluting metabolite to assess the safety of the chemical compound. The method is useful for determining whether the chemical compound, or its metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the

The gene contains variations at bases 886: T to C and 1457: C to G as compared to the wild type sequence (AAO87729). These change the amino acid residues 296: Cys to Arg and 486: Thr to Ser. The cDNA was amplified by PCR using the primers AAQ87763-6. The product was cloned into the yeast expression vectors pAAH5N or pAHRR to produce the vectors p2D6 variant 2 for the

expression of the cytochrome P450 alone or p2D6R variant 2 for co-expression with the yeast NADPH-P450 reductase.

The vectors are used in a method for evaluating the safety of a chemical compound by reacting the chemical compound with recombinantly produced human cytochrome P450 molecular species 1A2 (AAQ87714), 2C9 (AAQ87715), 2E1 (AAQ87716), or 3A4 (AAQ87717) or their auxiliary species and variants (AAQ87718-32), and yeast NADH-P450 reductase, either as protein or in cell extracts, and analysing the resulting metabolite to determining whether the chemical compound. The method is useful for determining whether the chemical compound. The metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the

```
The nucleotide sequence of the CDNA coding region for the human
auxillary cytochrome P450 species 2D6 variant 3. The gene contains a
change at base 1457 from c to G as compared to the wild type sequence
(AAQ87729). This changes the amino acid residue 296 from Thr to Ser. The
cDNA was amplified by PCR using the primers AAQ87763-6. The product was
cloned into the yeast expression vectors pAAHSN or pAHRR to produce the
vectors p2D6 variant 3 for the expression of the cytochrome P450 alone
or p2D6R variant 3 for co-expression with the yeast NADPH-P450
corpound by reacting the chemical compound with recombinantly
corpound numan cytochrome P450 molecular species 1A2 (AAQ87714), 2C9
(AAQ87715), 2E1 (AAQ87716), or 3A4 (AAQ8777) or their auxillary species
cond variants (AAQ87716) or 3A4 (AAQ8777) or their auxillary species
clused protein or in cell extracts, and analysing the resulting metabolite
co assess the safety of the chemical compound. The metabolite
converted into a carcinogenic or mutagenic form through metabolism in the

```
This is the nucleotide sequence of the human cytochrome P450 molecular species 2D6 variant #1 which encodes a protein of 497 amino acids. The gene was amplified from a human liver derived cDNA library as 2 compared from a human liver derived cDNA library as 2 conded into the yeast expression vector pAAH5N to generate plasmid P2D6 for prodn. of the cytochrome only or into the vector PAHRR to generate control of the plasmid p2C6R for co-prodn. with the yeast NADBH-P450 reductase. The sequence is placed under control of the yeast ADH gene promoter and ctaminator. The vectors are used in amethod for evaluating the safety of a cpd. by reacting the test cpd. with recombinantly produced human cytochrome P450 mol. species 1A2 (AAT28380), 2C9 (AAT28381), 2E1 (AAT28382), 3A4 (AAT28383) or their variants (AAT28384-98) together with yeast NADPH-P450 reductase (either as a fused protein or as a cell carract) and analysing the resultant metabolite. The cpd. is considered carractly and analysing the resultant metabolite. The cpd. is considered serial if it is detoxified or is metabolised to a carcinogenic or "unsafe" if it is sequence 1494 BP; 248 A; 508 C; 446 G; 292 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human cytochrome P450; amplified; PCR; polymerase chain reaction; primer; liver; yeast; expression vector; NADPH-P450 reductase; ADH gene promoter; evaluation; safety; fusion protein; metabolite; detoxification;
                                                                                                                                                                                                                                                                                                                                                                                                                             This is the nucleotide sequence of the human cytochrome P450 molecular species 2D6 variant #2 which encodes a protein of 497 amino acids. The gene was amplified from a human liver derived cDNA library as 2 fragments of 0.4 and 0.9 kb using primers AAT26953-6. The prod. was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel method for the evaluation of the safety of a cpd. - using a human cytochrome P450 and yeast NADPH reductase to determine whether the analyte cpd. is detoxified or metabolised to a carcinogen

cloned into the yeast expression vector pAAH5N to generate plasmid p2D6 for prodn. of the cytochrome only or into the vector pAHRR to generate the plasmid p2C6R for co-prodn. with the yeast NADHPH-P45D reductase. The sequence is placed under control of the yeast ADH gene promoter and terminator. The vectors are used in a method for evaluating the safety of a cpd. by reacting the test cpd. with recombinantly produced human cytochrome P450 mol. species lA2 (AAT28380), 2C9 (AAT28381), 2E1 (AAT28382), 3A4 (AAT28383) or their variants (AAT28384-98) together with yeast NADPH-P450 reductase (either as a fused protein or as a cell extract) and analysing the resultant metabolite. The cpd. is considered is not detoxified or is metabolised to a carcinogenic or "unsafe" if it softentified or is metabolised to a carcinogenic cpd.
                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human cytochrome P450; amplified; PCR; polymerase chain reaction; primer;

The gene was amplified from a human liver derived cDNA library as 2 fragments of 0.4 and 0.9 kb using primers AAM26953-6. The prod. was cloned into the yeast expression vector pAAH5N to generate plasmid p2D6 for prodn. of the cytochrome only or into the vector pARRR to generate the plasmid p2C6R for co-prodn. with the yeast NADH-1450 reductase. The sequence is placed under control of the yeast ADH gene promoter and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the nucleotide sequence of the human cytochrome P450 molecular species 2D6 variant #4 which encodes a protein of 497 amino acids. The gene was amplified from a human liver derived cDNA library as 2 fragments of 0.4 and 0.9 kb using primers AAT5053.6. The prod. was cloned into the yeast expression vector pAAH5N to generate plasmid p2D6 for prodn. of the cytochrome only or into the vector pAHRR to generate the plasmid p2C6R for co-prodn. with the yeast NADPH-P450 reductuse. The sequence is placed under control of the yeast ADH gene promoter and terminator. The vectors are used in a method for evaluating the safety of a cpd. by reacting the test cpd. with recombinantly produced human cytochrome P450 mol. species 1A2 (AAT28380), 2C9 (AAT28381), 2E1 (AAT28382), 3A4 (AAT28383) or their variants (AAT28384-98) together with
terminator. The vectors are used in a method for evaluating the safety of a cpd. by reacting the test cpd. with recombinantly produced human cytochrome P450 mol., species 1A2 (AAT28380), 2C9 (AAT28381), 2E1 (AAT28381), 2A4 (AAT28383) or their variants (AAT28384-98) together with yeast NADPH-P450 reductase (either as a fused protein or as a cell extract) and analysing the resultant metabolite. The cpd. is considered "safe" if it is detoxified or not rendered carcinogenic or "unsafe" if it is not detoxified or is metabolised to a carcinogenic cpd. second considered sequence 1494 BP; 248 A; 508 C; 447 G; 291 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human cytochrome P450; amplified; PCR; polymerase chaln reaction; primer; liver; yeast; expression vector; NADPH-P450 reductase; ADH gene promoter; evaluation; safety; fusion protein; metabolite; detoxification;

yeast NADPH-P450 reductase (either as a fused protein or as a cell extract) and analysing the resultant metabolite. The cpd. is considered "safe" if it is detoxified or not rendered carcinogenic or "unsafe" if it is not detoxified or is metabolised to a carcinogenic cpd. Sequence 1494 BP; 248 A; 507 C; 447 G; 292 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes the human derived cytochrome (HDC) P4502D6, which was obtd. from a commercial cDNA library. Yeast were transfected with an expression vector contg. the HDC cDNA, cultured and then disrupted to give a microsomal fraction. The HDC was purified from the fraction, and used to immunise and sensitise a mammal. Blood was drawn from the mammal, and an anti-HDC antibody isolated. The antibody obtd. recognises HDC P4502D6, partic. at a serum dilution rate of 1:10000, and is substantially without cross reaction to other HDC P450 spp..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibody recognising human derived cytochrome P4502D6 - allows specific detection of cytochrome P450 species in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

The invention relates to a method for haplotyping the cytochrome P450, subfamily IID, polypeptide 6 (CYP2D6) gene (ABQ7215, ABQ72364) of an individual, and also describes 29 novel polymorphic stres within the human CYP2D6 gene. The CYP2D6 gene is located on chromosome 22q13.1 and because involved in the detoxification of many drugs and contains 9 exons which encode a 497 amino acid protein (ABB09563). CYP2D6 is a mono-oxygenase involved in the detoxification of many drugs and centromental chemicals. It plays a role in the metabolism of drugs such as antiarrhythmics, adrenoreceptor antagonists and tricyclic antidepressants, and is also involved in the formation of a metabolite inked to the drug-induced lupus syndrome observed with procainanide. Variations in CYP2D6 activity or expression may also influence an individuals susceptibility to environmentally-linked diseases, and it has been demonstrated that CYP2D6 activity may be involved in the pathogenesis of Parkinsons's disease, with individuals with a less active condition. CYP2D6 nucleic acid sequences are useful in studying the expression and drug-induced lupus syndrome) or which are metabolised by CYP2D6. The treatment of CYP2D6 associated diseases (e.g., hypertension, atrial and ventricular arrhythmias, parkinson's disease, and drug-induced lupus syndrome) or which are metabolised by CYP2D6. Of polymorphisms on the biological activity of CYP2D6, polymorphisms on the biological activity of CYP2D6, polymorphisms on the biological activity of CYP2D6. Polymorphisms on the biological activity of CYP2D6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel genetic variants of Cytochrome P450, Subfamily IID, Polypeptide 6 isogenes, useful for improving efficiency and reliability in drug development for treating hypertension, arrhythmias and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1620 ATGGGGCTAGAAGCACTGGTGCCCCTGGCCGTGATAGTGGCCATCTTCCTGCTCCTGGTG 1679

It is not expected to encode a functional protein as it contains part of intron 1 and has a functional protein as it contains part of intron 1 and has a frameshift relative to the functional gene. The other base pair sequences between the pwp32/pmp33 sequence and the normal dbl sequence form the basis of detection methods designed to distinguish EM/PW phenotypes. For example, at position 294 of the variant sequence G replaces the wild-type C. This introduces a HaeIII restriction site in PM individuals. PCR amplification of a 172bp fragment containing this site, followed by HaeIII digestion allows homozygous EM individuals. See AAQ12885-012894.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-SEP-2000;
29-SEP-2000;
           The invention relates to a DNA array for identifying cancer related genes. The DNA array comprises: (a) statistically significantly higher results of over 10% in homology search of a DNA molecule describing different genes or a complementary DNA (cDNA); (b) statistically significantly higher results (p value) of over 10% in homology search with human Alu sequence; (c) difference of melting temperature of the DNA fragment and hybridisation temperature at 30 degree C or less; (d) the DNA fragment prepared by immobilisation of a DNA short sequence with short repetition higher order structure; and (e) the DNA fragment without short repetitive sequence. The array is used in elucidation of the action mechanism of anticancer agents. ABK92989-ABK93090 represent human cancer related genes and associated primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A DNA array that observes the expression of cancer related genes is useful for the elucidation of the action mechanism of anticancer agents % \left( 1\right) =\left\{ 1\right\} =\left\{ 1\right\}

AAK54951 to AAK64702 encode the human immune/hacmatopoictic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polyuucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to produce to cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer human immune/haematopoietic-darived cells. AAK64703 cancers and reast human immune/haematopoietic antigen genomic cancers the present human immune/haematopoietic antigen genomic represent sequences trom the present invention. AAK64942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; immune; haematopoietic; immune/haematopoletic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human immune/haematopoietic antigen genomic sequence SEQ ID NO:32419.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 32419; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
complement the patients own produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent.

Children and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              d nucleic acid molecule encoding a reproductive system antigen in preventing, treating or ameliorating a medical condition

(HUMA-) HUMAN GENOME SCI INC

```
The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. broast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointesinal tract, liver, lung, or urogenital; (b) immune characters e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collitis; (c) cardiovascular discrets such as myocardial isohaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.

Dersitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; reproductive system related antigen; reproductive system disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                   Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human reproductive system related antigen DNA SEQ ID NO: 6967.

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 6967; 1297pp + Sequence Listing; English.

                                                                                                                 09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-AUG-2000
   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with lamppropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
complement the patients own produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
co AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54912 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Amountain the partients and panel numbers, and an antitude of antitude of antitude of antitude of antitude of antitude of activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and transment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) colynucleotides may be used to produce the secreted (1), by inserting polynucleotides may be used to produce the secreted (1), by inserting the call in proteins and polynucleotides may be used to protect of diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. Akk64703 to AAK87694 represent human immune/haematopoietic antigon genomic sequences from the present invention. Addition of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immunosuppressive; antiinflammatory; arti-HIV; antibacterial; vulnerary; antiparkinsonian; antisickling; antianaemic; antiarthritic; cancer; antirhaumatic; hepatotropic; cerebroprotective; antinflammatory; antiallergic; antidiabetic; antilocar; anticonvulsant; antifungal; antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine; ds.

WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

Disclosure; SEQ ID NO 13036; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The higgorisis, treatment and prevention of: (a) cancer, e.g. breast in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chaemolytic anemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and and parastic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 13038; 1701pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (1)

amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
creatment of diseases associated with inappropriate (1) expression. For
example, they may be used to treat disorders associated with decreased
creatment be prectifying mutations or deletions in a patient's genome
that affect the activity of (1) by expressing inactive proteins or to
supplement the patients own production of (1). Additionally, (1)
csupplement the patients own production of (1). Additionally, (1)
copolynucleotides may be used to produce the secreted (1), by inscrting
the nucleic acids into a host cell and culturing the cell to express the
correction. (I) proteins and polynucleotides may be used to provent,
diagnose and treat immune/haematopoietic-related diseases, especially
concerns and cancer metastases of haematopoietic antigen genomic
characteristic from the present invention. AAK84942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

                                                                                                                                                                                                                                               AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
ce expression by rectifying mutations or deletions in a patient's genome
control of the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
consultations and polynuclectides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
connects and cancer metastess of haematopoietic-related diseases, especially
connects and cancer metastesses of haematopoietic antigen genomic
connects and cancer metastesses of haematopoietic antigen genomic
connects from the present invention. AAK54942 to AAK84950 and AAM82169
ce represent sequences used in the exemplification of the present invention.

The invention relates to isolated human polypeptides (which may be cytokines) and the polynucleotides encoding them. The protein is useful cort identifying a compound which binds to it (e.g. modulators, agonists and antagonists). The polynucleotides are useful as an array for mismatch detection. The proteins and nucleic acids are useful as nutritional sources or supplements. The protein exhibits exhibits activity relating to cytokine, cell proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity, immune stimulating or immune suppressing and activin or inhibin related activities. The proteins (and antibodies raised against them) and nucleic acids are therefore useful in the diagnosis and treatment of diseases and disorders such as cancer, central and peripheral nervous system diseases and neuropathies, central and peripheral nervous system diseases and neuropathies, at lateral sclerosis, spinal cord disorders, head trauma, cerebrovascular diseases, stroke, myeloid or lymphoid cell disorders, platelet disorders, thrombooytopaenia, stem cell disorders, allosted in tissue cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, inciations, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, or ericating osteoporosis, various immune disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, diabeter molitics and disorders including autoimmune disorders including area.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diabetes mellitus, myasthenia gravis), allergic reactions and conditions, such as asthma or other respiratory problems, coagulation disorders, haemophilia), septic shock, sepsis, arthritis, nephritis and inflammatory bowel disease, viral infection and are useful in altering bodily characteristics. The present sequence encodes a novel protein of the

```
Two human bacterial artificial chromosome (BAC) clones that included and flanked the human CTLA-4 locus were cloned and sequenced. The sequence data was assembled into a contiguous sequence that is presented in AAA9563-68. AAA95636-64 comprise BAC clone 22700, and AAA96365-68 comprise BAC clone 22608. The sequences contain polymorphic microsatellite repeat (PMR) sequences. The specification describes a method for determining the predisposition of a human subject to develop autoimmune disease. The method comprises detecting a PMR sequence in the 1028, ICOS gene or CTLA4 gene of the human costimulatory receptor gene locus (hCGRL). PMR sequences vary in length among individuals and can be amplified to generate products that differ in size. These products can then be detected by rapid and convenient high resolution processes. The method is useful for determining the predisposition of insulin dependent attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         method is useful for determining the predisposition of insulin-dependent diabetes mellitus (IDDM), Addison's disease, Graves disease, autoimmune hypothyroidism, myasthenia gravis, thymoma, lupus, thyroiditis, postpartum thyroiditis, rheumatoid arthritis, Hashimoto's disease, coeliac disease and leprosy. PMR sequences within hCRGL are useful as markers in a variety of assays and in the field of forensic medicine, disease diagnosis and human genome mapping.

                                            The present invention provides inhibitors of histone deacetylase enzymes such as HDAC-1, HDAC-2, HDAC-2, HDAC-5, HDAC-0. These inhibitors may be antisense strands or they may be compounds identified by contacting the enzyme with the compound and measuring the resulting enzyme activity. These inhibitors are useful for treating cancers and for
                                                                                                                                                                                                                                                                                                       Gaps

(METH-) METHYLGENE INC.

```
The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated the expression level to an expression level in an unactivated of GCA. Also included are modulating (MS) GA by contacting GCA with an agent that alters the expression of at least one gene in GS: (2) screening (MS) for an agent capable of modulating GCA or an inflammation (especially chord of a least one gene in GS: (2) screening (MS) for an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially cronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammation; for the level of expression in a sample of the tissue of gene(s) from GS, where the level of expression of the gene is indicative of inflammation; (4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. MI is useful for detecting an allergic of modulating GCA, M3 is useful for screening an agent capable of modulating GCA prefectally in an inflammation (especially chronic) in a tissue, an allergic exposure of a subject to a pathogen or sterile of anymistic response in a subject of a pathogen or sterile of anymistic and anymistic anymistic and anymistic anymistic anymistic anymistic anymistic any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, crohn's alsease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                        Human; ss; granulocytic cell; DNA chip; bacterial infection; viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; andlt respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
Human cDNA differentially expressed in granulocytic cells #30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the printed specification, but was obtained in electronic mat directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a new substantially pure Claspin polypeptide that specifically interacts with a ChKI protein, having SO/TO motifs, an isoelectric point of 4.5 and at least one nuclear localisation signal. The method of the invention is useful for identifying a compound that modulates call cycle progression and for modulating call cycle progression in a cell. The invention is useful for the proper operation of DNA replication checkpoint in the cell cycle. The method is also useful for treating a disorder associated with cell cycle progression e.g. cell proliferative disorder such as benign or malignant neoplasm. The molecules of the invention are also useful for detecting the altered
                                                                                                                                                                                                                                                                                                                                   ChKl protein; SQ/TQ motif; isoelectric point; cell cycle progression; ds; nuclear localisation signal; DNA replication checkpoint; benign neoplusm; cell proliferative disorder; malignant neoplasm; human; claspin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel Claspin polypeptide specifically interacting with ChKI protein useful for identifying compound that modulates cell cycle progression and for treating cell proliferative disorder like neoplasm .
                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's cancers, multiple solerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. carebral anoxia and parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                   Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00100-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell prollferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

    is also useful as a pharmacodyanamic or pharmacogenomic marker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                 The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and extivity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                             treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II).

(I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polynucleotide hybridising to (IV) and comparing the amount of polynucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PGN). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells with (III) or (III) is useful in design and preparation of robozyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a contacting to the contacting and contacting a contacting and contacting a contacting a contacting a contacting and contacting a contacting a contacting a contacting a contacting a contacting a contacting and contacting a contacting a contacting and contacting a contacting and contacting a contacting a contacting and a contacting a contacting and a contacting a contacting a contacting and contacting and contacting a contacting a contacting a contacting and a contacting and a contacting and

                                                                                                                                                                                                                                                                                   ö
                                           The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81266 to AAA81303 and AAA825620 to AAA825663 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 the AAA81259 and AAA81304 to AAA81321 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences; and AAA81322 to AAA81452 represent Neisseria meningitidis ManB polynucleotide ORF sequences, which are all used in the exemplification of the present

    is also useful as a pharmacodyanamic or pharmacogenomic marker.

specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                     invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes; particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-AUG-2001.
                                                                                                                                                                                                                                AAL03263;
                                                                                                                                                    RESULT 45
AAL03263
                                                                                              g
                                                            å
                                                                                                                                                                                                                                  AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
complynicateotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
concerns and cancer metastases of haematopoletic-related diseases, especially
concerns and cancer metastases of haematopoletic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 36244; 3071pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition

Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of 973 mean testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and assatcolitestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention.

                                                                                                         The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                              Isolated nucleic acid molecule encoding a reproductive system antigen
                                                                                                                                                                                                                                      Gaps
                                                            used in preventing, treating or ameliorating a medical condition

```

```
The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

```
The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention.
                                                                                                                                                                                                                                                                         Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 2.5%; Score 42; DB 23; Length 24983; Best Local Similarity 100.0%; Pred.
